WHAT DOES THE FUND INVEST IN?

The Fund's investment objective is to provide a higher yield than the TSX Composite Index while maximizing total investment return and attempting to preserve capital during bear markets through diversification across a broad range of securities. The portfolio will generally be comprised of equity securities listed on the TSX. The Fund may hold foreign securities that are listed on the TSX. No more than 10% of NAV will be invested in foreign securities. Assets of the Fund may also be held in cash to the extent that economic, market, or other conditions make it appropriate. The Manager uses a 100% systematic, algorithmically driven, rules-based process to construct the portfolio. The TSX is screened for equity securities that have stable and growing dividend payments, must not have cut their dividends in the past five years and have increased dividends in at least three of the past five years. The remaining stocks are then weighted according to a nonlinear ratio of their respective dividend yields to their respective volatilities.

HOW RISKY IS IT?

The value of the Fund can go down as well as up. You could lose money. One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less overtime. They typically have lower returns and may have a lower chance of losing money.
